Spill Prevention Control and Countermeasure Plan (SPCC)

Skidmore College maintains a Spill Prevention Control and Countermeasure Plan (SPCC) to prevent petroleum spills and minimize impacts to the environment from the accidental release of oil or petroleum products. Included in the SPCC Plan is a discussion of actions to take place any time there is a release that could threaten the environment.

Contained in this SPCC are a description of petroleum storage practices at Skidmore College and procedures to be used to minimize the potential for a petroleum release to the environment. In the event of a release, the actual steps employees must follow are detailed in the SPCC.

Copies of the Plan are kept in the Facilities Services office in North Hall and at Campus Safety located in Jonnson Tower.
