

CHINA PLANET: ENVIRONMENTAL IMPLICATIONS OF THE RISE OF CHINA

What are the environmental implications of the rise of China? In this talk, Prof. Judith Shapiro will share her personal experiences with China's environmental movement and reflect on what China's new superpower status means for resources extraction, global biodiversity, and climate change. Will "ecological civilization" save the planet or destroy it? Professor Shapiro will argue that the future of the world lies with China.

Wednesday, March 29
7 pm | Davis Auditorium
Reception to follow

Prof. Judith Shapiro
