The valuation of a defined benefit pension plan involves estimates and assumptions about the probability of events occurring far into the future. Examples include assumptions about future employment, mortality, and retirement. Below is a description of the actuarial assumptions used in the valuation.

Funding Target Liability

Actuarial Value of Assets: Market Value as provided by trustee.

Cost Method: As required by PPA, the Traditional Unit Credit Cost Method is used.

Valuation Date: June 1, 2012

Demographic Information: The demographic information was provided as of June 1, 2012 by Skidmore College. Although, we did not audit the data, we did review it for reasonableness.

Interest Rates: The adjusted 24-month average June 2012 funding segment rates using 25-year average segment rate corridors were utilized as prescribed by IRC Section 430(h) and MAP-21 and elected by Skidmore College.

Segment	Probability
Segment 1	5.54%
Segment 2	6.85%
Segment 3	7.52%

Segment 1 is applied to benefit payments expected to be made in the first 5 years, segment 2 is applied to benefit payments expected to be made in the next 15 years and segment 3 is applied thereafter.

Effective Interest Rate: 6.53%

Rate of Compensation Increase: Salary increases were not assumed.

Mortality: The blended annuitant/non-annuitant RP-2000 Mortality Table for annuitants and nonannuitants with projected mortality improvements using Scale AA; specifically as outlined in IRC Regulation 1.430(h)(3)-1 for 2012 valuations. The static mortality tables are projected from the base table for the year 2000 through 2012 with further projection to reflect the approximate expected duration of liabilities, namely 7 years for annuitants and 15 years for non-annuitants.

Retirement Rates: The probability of retirement for active employees eligible to retire at each age, with completion of twelve years of service, is as follows:

Age	Probability
55-59	0%
60	15%
61	5%
62	45%
63	15%
64	20%
65	100%

1

Termination: None assumed.

Rates of Disablement: Rates of disablement were not assumed

Skidmore College

Supplemental Retirement Plan

EIN/PN: 14-1338562/001

Harbridge Consulting Group, L.L.C

ACTUARIAL ASSUMPTIONS AND METHODS

Administrative Expenses: Prior year's administrative expenses rounded to nearest \$1,000.

Percent of Married: Not assumed. Actual optional form election utilized for current retirees.

Form of Payment: 100% of future retirees are assumed to elect a lump sum distribution at retirement.

Actuarial Present Value of Accumulated Plan Benefits (ASC 960)

Interest Rate: 6.00%

Unless specifically mentioned, all remaining assumptions for the Actuarial Present Value of Accumulated Plan Benefits remain the same as described for the Funding Target Liability above.

2

Skidmore College Supplemental Retirement Plan Schedule SB, Line 22 – Description of Weighted Average Retirement Age EIN/PN: 14-1338562/001

<u>Retirement Rates</u> – The assumed number of retirements expected per 1,000 active employees eligible to retire at each age, with completion of twelve years, is as follows:

Age	Retirement
55-59	0
60	150
61	50
62	450
63	150
64	200
65	1,000

Therefore, the weighted average retirement age is equal to:

 $60^{*}.15+61^{*}(1-.15)^{*}.05+62^{*}(1-.15)^{*}(1-.05)^{*}.45+\ldots+65^{*}(1-.15)^{*}\ldots^{*}(1-.2)=62.78114$
